

### **Brow Aftercare**

Day 1: OMG! I'm in love with my new brows. Thank you.

Day 2-4: I don't like this color, it's too dark.

Day 5-7: Oh, no! My brows are scabbing and falling off.

Day 8-10: WTF? My brows are gone!

Day 14-28: Thanks God my brows are coming back! Still looking patchy and uneven.

Day 42 (after touch up): Aww, they're beautiful! I love them! Thanks again.

After procedure, an aftercare ointment will be applied to your brows. This will remain on your brows for 12-24 hours; it is imperative that you do not remove, wash, or excessively sweat during the first 24 hrs of the procedure. Wash your brows ONCE daily but no more than that. DO NOT scrub or use abrasive products during this time. After washing, allow your brows to air dry for 30 minutes and then apply a light layer of the aftercare 2 times per day to help prevent scabs from forming. Apply after care for 5 days twice a day and then, after the 5<sup>th</sup> day, proceed with aftercare at night to keep them moisturized.

The following MUST be avoided during the initial 7 days post procedure:

- o Increased sweating, swimming
- o Hot sauna, hot bath, hot shower, or Jacuzzi
- o Sun tanning or salon tanning (tanning booth)
- o Any laser, chemical peels, chemical treatments
- o Creams containing AHA, Glycolic Acid, Retin-A
- o Picking, scrubbing, peeling, scratching
- o Drinking alcohol in excess
- o Driving/riding in open air vehicle (convertibles, scooters, bicycles, motorcycles, boats)
- o Wear sunscreen after day 7 to protect your pigment, SPF 30 or higher

As depicted above your new brows will go through several phases during the healing process. During the initial stage your pigment will appear strong and sharp; this is because the pigment is still on the surface of the skin and has not yet settled. The pigmentation will begin to soften gradually; day 2-5 can be difficult for some people. Once the skin begins its healing process it might look like you have dandruff flakes or dry skin; this might give you the impression you are losing pigmentation too quickly. DON'T WORRY; this is simply superficial color and dry skin being removed. Once you are healed and aftercare is completed you are advised to apply a light layer of sunscreen, SPF 30 or higher (look for a non-greasy or waterproof formula). Sun exposure may result in your pigment to fade more quickly.

\*If you start to scab DO NOT PICK AT THEM, while undesirable; however, just allow them to heal! This may result in extended healing time.

Most importantly please enjoy your new gorgeous brows!
